

Peruvian Computing Society (SPC)

School of Computer Science Sillabus 2022-I

1. COURSE

CS3I1. Computer Security (Mandatory)

2. GENERAL INFORMATION

2.1 Credits : 3

2.2 Theory Hours
2.3 Practice Hours
2.4 Duration of the period
16 weeks
Type of course
Mandatory
Modality
Face to face

2.7 Prerrequisites : CS231. Networking and Communication. (7th Sem)

3. PROFESSORS

Meetings after coordination with the professor

4. INTRODUCTION TO THE COURSE

Nowadays, information is one of the most valuable assets in any organization. This course is oriented to be able to provide the student with the security elements oriented to protect the Information of the organization and mainly to be able to foresee the possible problems related to this heading. This subject involves the development of a preventive attitude on the part of the student in all areas related to software development.

5. GOALS

- Discuss at an intermediate intermediate level the fundamentals of Computer Security.
- Provide different aspects of the malicious code.
- That the student knows the concepts of cryptography and security in computer networks.
- Discuss and analyze together with the student the aspects of Internet Security.

6. COMPETENCES

- a) An ability to apply knowledge of mathematics, science. (Usage)
- b) An ability to design and conduct experiments, as well as to analyze and interpret data. (Usage)
- e) Understand correctly the professional, ethical, legal, security and social implications of the profession. (Usage)
- f) An ability to communicate effectively. (Usage)
- g) The broad education necessary to understand the impact of computing solutions in a global, economic, environmental, and societal context. (Usage)
- h) A recognition of the need for, and an ability to engage in life-long learning. (Usage)
- i) An ability to use the techniques, skills, and modern computing tools necessary for computing practice. (Usage)
- 1) Develop principles research in the area of computing with levels of international competitiveness. (Usage)

7. SPECIFIC COMPETENCES

a49) Apply mathematical methods and concepts in an encryption process to protect information

- a50) Apply mathematics in different types of encryption: symmetric, asymmetric and hashing.
- **b24)** Analyze the computational power needed to be able to decipher and calculate the value of a key.
- e2) Demonstrate a proper understanding of the safety implications of the software you build.
- e3) Determine the value of the information to prioritize the level of protection required
- e4) Identify the risks that may be involved in the operation of computer equipment within a given context
- e5) Understand, apply and manage protection and security systems in their different states and formats.
- f1) Clearly transmit technical proposals to audiences in other areas.
- g1) Develop solutions that solve an existing problem in our society.
- h3) Use data collected from computer events to prevent future attacks
- i10) Use modern techniques and tools for the detection and reduction of risks due to possible vulnerabilities.
- 11) Demonstrate that you have developed research according to an undergraduate level.

8. TOPICS

Unit 1: Foundational Concepts in Security (25)		
Competences Expected: a,g		
Topics	Learning Outcomes	
 CIA (Confidentiality, Integrity, Availability) Concepts of risk, threats, vulnerabilities, and attack vectors Authentication and authorization, access control (mandatory vs. discretionary) Concept of trust and trustworthiness Ethics (responsible disclosure) 	 Analyze the tradeoffs of balancing key security properties (Confidentiality, Integrity, Availability) [Familiarity] Describe the concepts of risk, threats, vulnerabilities and attack vectors (including the fact that there is no such thing as perfect security) [Familiarity] Explain the concepts of authentication, authorization, access control [Familiarity] Explain the concept of trust and trustworthiness [Familiarity] Recognize that there are important ethical issues to consider in computer security, including ethical issues associated with fixing or not fixing vulnerabilities and disclosing or not disclosing vulnerabilities [Familiarity] 	
Readings: [WL14]		

Unit 2: Principles of Secure Design (25)	
Competences Expected: g,a,e,h Topics	Learning Outcomes
 Least privilege and isolation Fail-safe defaults Open design End-to-end security Defense in depth (e.g., defensive programming, layered defense) Security by design Tensions between security and other design goals Complete mediation Use of vetted security components Economy of mechanism (reducing trusted computing base, minimize attack surface) Usable security Security composability Prevention, detection, and deterrence 	 Describe the principle of least privilege and isolation as applied to system design [Familiarity] Summarize the principle of fail-safe and deny-by-default [Familiarity] Discuss the implications of relying on open design or the secrecy of design for security. [Familiarity] Explain the goals of end-to-end data security [Familiarity] Discuss the benefits of having multiple layers of defenses [Familiarity] For each stage in the lifecycle of a product, describe what security considerations should be evaluated. [Familiarity] Describe the cost and tradeoffs associated with designing security into a product [Familiarity] Describe the concept of mediation and the principle of complete mediation [Familiarity] Be aware of standard components for security operations, instead of re-inventing fundamentals operations [Familiarity] Explain the concept of trusted computing including trusted computing base and attack surface and the principle of minimizing trusted computing base [Familiarity] Discuss the importance of usability in security mechanism design [Familiarity] Describe security issues that arise at boundaries between multiple components. [Familiarity] Identify the different roles of prevention mechanisms and detection/deterrence mechanisms [Familiarity]
Readings: [WL14]	<u>L</u>

ics	Learning Outcomes
 Input validation and data sanitization Choice of programming language and type-safe languages Examples of input validation and data sanitization errors Buffer overflows Integer errors SQL injection XSS vulnerability Race conditions Correct handling of exceptions and unexpected behaviors Correct usage of third-party components Effectively deploying security updates Information flow control Correctly generating randomness for security purposes Mechanisms for detecting and mitigating input and data sanitization errors Fuzzing Static analysis and dynamic analysis Program verification Operating system support (e.g., address space randomization, canaries) Hardware support (e.g., DEP, TPM) 	 Explain why input validation and data sanitize is necessary in the face of adversarial control or input channel. [Usage] Explain why you might choose to develop a progin a type-safe language like Java, in contrast the unsafe programming language like C/C++ [Usage] Classify common input validation errors, and we correct input validation code [Usage] Demonstrate using a high-level programming guage how to prevent a race condition from occur and how to handle an exception [Usage] Demonstrate the identification and graceful hand of error conditions [Familiarity] Explain the risks with misusing interfaces with the party code and how to correctly use third-party [Familiarity] Discuss the need to update software to fix sectival value and the lifecycle management of fix [Familiarity]

Unit 4: Threats and Attacks (25) Competences Expected: b,e,i Topics **Learning Outcomes** • Describe likely attacker types against a particular • Attacker goals, capabilities, and motivations (such as system [Familiarity] underground economy, digital espionage, cyberwarfare, insider threats, hacktivism, advanced persistent • Discuss the limitations of malware countermeasures threats) (eg, signature-based detection, behavioral detection) • Examples of malware (e.g., viruses, worms, spyware, [Familiarity] botnets, Trojan horses or rootkits) • Identify instances of social engineering attacks and • Denial of Service (DoS) and Distributed Denial of Denial of Service attacks [Familiarity] Service (DDoS) • Discuss how Denial of Service attacks can be identified and mitigated [Familiarity] • Social engineering (e.g., phishing) Attacks on privacy and anonymity • Describe risks to privacy and anonymity in commonly used applications [Familiarity] • Malware/unwanted communication such as covert • Discuss the concepts of covert channels and other channels and steganography data leakage procedures [Familiarity] Readings: [WL14]

Competences Expected: b,e,i	
Topics	Learning Outcomes
 Network specific threats and attack types (e.g., denial of service, spoofing, sniffing and traffic redirection, man-in-the-middle, message integrity attacks, routing attacks, and traffic analysis) Use of cryptography for data and network security Architectures for secure networks (e.g., secure channels, secure routing protocols, secure DNS, VPNs, anonymous communication protocols, isolation) Defense mechanisms and countermeasures (e.g., network monitoring, intrusion detection, firewalls, spoofing and DoS protection, honeypots, tracebacks) Security for wireless, cellular networks Other non-wired networks (e.g., ad hoc, sensor, and vehicular networks) Censorship resistance Operational network security management (e.g., configure network access control) 	 Describe the different categories of network threats and attacks [Familiarity] Describe the architecture for public and private key cryptography and how PKI supports network security [Familiarity] Describe virtues and limitations of security technologies at each layer of the network stack [Familiarity] Identify the appropriate defense mechanism(s) and its limitations given a network threat [Usage]
Readings: [WL14]	

Unit 5: Network Security (25)

Unit 6: Cryptography (25) Competences Expected: b,e,i Topics **Learning Outcomes** • Describe the purpose of Cryptography and list ways • Basic Cryptography Terminology covering notions pertaining to the different (communication) partit is used in data communications [Familiarity] ners, secure/unsecure channel, attackers and their • Define the following terms: Cipher, Cryptanalysis, capabilities, encryption, decryption, keys and their Cryptographic Algorithm, and Cryptology and decharacteristics, signatures scribe the two basic methods (ciphers) for transform-• Cipher types (e.g., Caesar cipher, affine cipher) toing plain text in cipher text [Familiarity] gether with typical attack methods such as frequency • Discuss the importance of prime numbers in crypanalysis tography and explain their use in cryptographic al-• Public Key Infrastructure support for digital signagorithms [Familiarity] ture and encryption and its challenges • Illustrate how to measure entropy and how to gen-• Symmetric key cryptography erate cryptographic randomness [Usage] - Perfect secrecy and the one time pad • Use public-key primitives and their applications [Usage - Modes of operation for semantic security and authenticated encryption (e.g., encrypt-then-• Explain how key exchange protocols work and how MAC, OCB, GCM) they fail [Familiarity] - Message integrity (e.g., CMAC, HMAC) • Discuss cryptographic protocols and their properties • Public key cryptography: [Familiarity] - Trapdoor permutation, e.g., RSA - Public key encryption, e.g., RSA encryption, EI Gamal encryption - Digital signatures - Public-key infrastructure (PKI) and certificates - Hardness assumptions, e.g., Diffie-Hellman, integer factoring • Authenticated key exchange protocols, e.g., TLS • Cryptographic primitives: - pseudo-random generators and stream ciphers - block ciphers (pseudo-random permutations), e.g., AES - pseudo-random functions - hash functions, e.g., SHA2, collision resistance - message authentication codes - key derivations functions

Readings: [WL14]

Unit 7: Web Security (25)		
Competences Expected: a,g		
Topics	Learning Outcomes	
 Web security model Browser security model including same-origin policy Client-server trust boundaries, e.g., cannot rely on secure execution in the client Session management, authentication Single sign-on HTTPS and certificates Application vulnerabilities and defenses SQL injection XSS CSRF Client-side security Cookies security policy HTTP security extensions, e.g. HSTS Plugins, extensions, and web apps Web user tracking Server-side security tools, e.g. Web Application Firewalls (WAFs) and fuzzers Readings: [WL14] 	 Describe the browser security model including same-origin policy and threat models in web security [Familiarity] Discuss the concept of web sessions, secure communication channels such as TLS and importance of secure certificates, authentication including single sign-on such as OAuth and SAML [Familiarity] Investigate common types of vulnerabilities and attacks in web applications, and defenses against them [Familiarity] Use client-side security capabilities [Usage] 	
readings: [WL14]		

Unit 8: Platform Security (25)	
Competences Expected: b,e,i	
Topics	Learning Outcomes
 Code integrity and code signing Secure boot, measured boot, and root of trust Attestation TPM and secure co-processors Security threats from peripherals, e.g., DMA, IOMMU Physical attacks: hardware Trojans, memory probes, cold boot attacks Security of embedded devices, e.g., medical devices, cars Trusted path Readings: [WL14]	 Explain the concept of code integrity and code signing and the scope it applies to [Familiarity] Discuss the concept of root of trust and the process of secure boot and secure loading [Familiarity] Describe the mechanism of remote attestation of system integrity [Familiarity] Summarize the goals and key primitives of TPM [Familiarity] Identify the threats of plugging peripherals into a device [Familiarity] Identify physical attacks and countermeasures [Familiarity] Identify attacks on non-PC hardware platforms [Familiarity] Discuss the concept and importance of trusted path [Familiarity]
neadings: [WL14]	

Unit 9: Digital Forensics (25) Competences Expected: a,g Topics **Learning Outcomes** • Basic Principles and methodologies for digital foren-• Describe what is a Digital Investigation is, the sources of digital evidence, and the limitations of forensics [Familiarity] • Design systems with forensic needs in mind • Explain how to design software to support forensics • Rules of Evidence - general concepts and differences [Familiarity] between jurisdictions and Chain of Custody • Describe the legal requirements for use of seized data • Search and Seizure of evidence: legal and procedural [Familiarity] requirements • Describe the process of evidence seizure from the • Digital Evidence methods and standards time when the requirement was identified to the disposition of the data [Familiarity] • Techniques and standards for Preservation of Data • Describe how data collection is accomplished and the • Legal and Reporting Issues including working as an proper storage of the original and forensics copy [Faexpert witness miliarity] • OS/File System Forensics • Conduct data collection on a hard drive [Usage] Application Forensics • Describe a person's responsibility and liability while Web Forensics testifying as a forensics examiner [Familiarity] • Network Forensics • Recover data based on a given search term from an imaged system [Usage] • Mobile Device Forensics • Reconstruct application history from application ar-• Computer/network/system attacks tifacts [Familiarity] • Attack detection and investigation • Reconstruct web browsing history from web artifacts [Familiarity] • Anti-forensics • Capture and interpret network traffic [Familiarity] • Discuss the challenges associated with mobile device forensics [Familiarity] Readings: [WL14]

Unit 10: Secure Software Engineering (25)		
Competences Expected: a,g,i,c		
Topics	Learning Outcomes	
 Building security into the software development lifecycle Secure design principles and patterns Secure software specifications and requirements Secure software development practices Secure testing- the process of testing that security requirements are met (including static and dynamic analysis). 	 Describe the requirements for integrating security into the SDL [Familiarity] Apply the concepts of the Design Principles for Protection Mechanisms, the Principles for Software Security (Viega and McGraw), and the Principles for Secure Design (Morrie Gasser) on a software development project [Familiarity] Develop specifications for a software development effort that fully specify functional requirements and identifies the expected execution paths [Familiarity] 	

Readings: [WL14]

9. WORKPLAN

9.1 Methodology

Individual and team participation is encouraged to present their ideas, motivating them with additional points in the different stages of the course evaluation.

9.2 Theory Sessions

The theory sessions are held in master classes with activities including active learning and roleplay to allow students to internalize the concepts.

9.3 Practical Sessions

The practical sessions are held in class where a series of exercises and/or practical concepts are developed through problem solving, problem solving, specific exercises and/or in application contexts.

10. EVALUATION SYSTEM

****** EVALUATION MISSING ******
