Undergraduate Program in
Computer Science
SILABO

CS210. Algorithms and Data Structures (Mandatory)

Universidad Católica
San Pablo
2023-II

1. General information		
1.1 School	:	Ciencia de la Computación
1.2 Course	:	CS210. Algorithms and Data Structures
1.3 Semester	:	4to Semestre.
1.4 Prerrequisites	:	

- CS113. Computer Science II. (3rd Sem)

- CS100. Introduction to Computer Science. (2nd Sem)

1.5 Type of course	:	Mandatory
1.6 Learning modality	:	Face to face
1.7 Horas	:	2 HT; 4 HP;
1.8 Credits	:	4
1.9 Plan	:	Plan Curricular 2016

2. Professors

Lecturer

- Alex Jesús Cuadros Vargas <acuadros@ucsp.edu.pe>
    - ■PosDocIn■ Ciencia de la Computación, ICMC-USP, Brasil, 2009.
    - PhD in Ciencia de la Computación, ICMC-USP, Brasil, 2007.
    - MSc in Ciencia de la Computación, ICMC-USP, Brasil, 2001.

- Gustavo Delgado Ugarte <ggdelgado@ucsp.edu.pe>
    - MSc in Ingeniería del Software, Escuela Universitaria de Ingeniería Industrial, Informática y Sistemas - UTA, Chile, 2009.

3. Course foundation

The theoretical foundation of all branches of computing rests on algorithms and data structures, this course will provide participants with an introduction to these topics, thus forming a basis that will serve for the following courses in the career.

4. Summary

1. Graphs 2. Scatter Matrices 3. Balanced Trees

5. Generales Goals

- Make the student understand the importance of algorithms for solving problems.

- Introduce the student to the field of application of data structures.

6. Contribution to Outcomes

This discipline contributes to the achievement of the following outcomes:

1) Analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions. (**Usage**)

2) Design, implement and evaluate a computing-based solution to meet a given set of computing requirements in the context of the program's discipline. (**Usage**)

6) Apply computer science theory and software development fundamentals to produce computing-based solutions. (**Usage**)

7. Content

UNIT 1: Graphs (12)

Competences:

Content	Generales Goals
- Graph Concept - Directed Graphs and Non-directed Graphs. - Using Graphs. - Measurement of efficiency ,in time and space. - Adjacency matrices. - Tag adjacent matrices. - Adjacency Lists. - Implementation of graphs using adjacency matrices. - Graph Implementation using adjacency lists - Insertion, search and deletion of nodes and edges. - Graph search algorithms.	- Acquire Dexterity to Perform Correct Implementation. [Usage] - Develop knowledge to decide when it is better to use one implementation technique than another. [Usage]

Readings: Cormen et al. (2009), Fager et al. (2014), Knuth (1997), Knuth (1998)

UNIT 2: Scatter Matrices (8)

Competences:

Content	Generales Goals
- Initial concepts. - Dense Matrices - Measurement of Efficiency in Time and Space - Static scatter vs. dynamic matrix creation. - Insert, search, and delete methods.	Understand the use and implementation of scatter matrices.[Assessment]

Readings: Cormen et al. (2009), Fager et al. (2014), Knuth (1997), Knuth (1998)

UNIT 3: Balanced Trees (16)	
Competences:	
Content	**Generales Goals**
- AVL Trees. - Measurement of Efficiency. - Simple and Composite Rotations - Insertion, deletion and search. - Trees B , B+ B* y Patricia.	Understand the basic functions of these complex structures in order to acquire the capacity for their implementation. [Assessment]
Readings: Cormen et al. (2009), Fager et al. (2014), Knuth (1997), Knuth (1998)	

8. Methodology

1. El profesor del curso presentará clases teóricas de los temas señalados en el programa propiciando la intervención de los alumnos.

2. El profesor del curso presentará demostraciones para fundamentar clases teóricas.

3. El profesor y los alumnos realizarán prácticas

4. Los alumnos deberán asistir a clase habiendo leído lo que el profesor va a presentar. De esta manera se facilitará la comprensión y los estudiantes estarán en mejores condiciones de hacer consultas en clase.

9. Assessment Theory Sessions:
The theory sessions are held in master classes with activities including active learning and roleplay to allow students to internalize the concepts.

Practical Sessions:
The practical sessions are held in class where a series of exercises and/or practical concepts are developed through problem solving, problem solving, specific exercises and/or in application contexts.

Evaluation System:
The final grade is obtained through of:

CONTINUOUS ASSESMENT	EVALUATIONS
Continuous assessment 1 : 5 %	**Midterm Exam** : 40 %
Continuous assessment 2 : 5 %	**Final Exam** : 50 %
10%	90%

Where:

Continuous Assessment: It includes group work, active participation in class, exercise test.

- Continuos assessment 1 (weeks 1 - 9)
- Continuos assessment 2 (weeks 10 - 17)

To pass the course you must obtain 11.5 or more in the final grade .
